

Dunsters Farm Environmental Statement

Dunsters Farm Foodservice supply food and drink to businesses across the North of England. We acknowledge the impact that our operations have on the environment. Our significant impacts are associated with energy use for refrigeration, transportation and the generation of waste.

We are committed to continually reducing the environmental impact of our activities. We believe that sustainability is not simply a part of our business but instead we work to embed a sustainability mindset throughout the entire business; challenging each department to continuously look to improve and drive positive change. We will ensure that we meet all legal and contractual requirements as a minimum and look to better our actions through continual research in to best practice from our sector and peers. As a third-generation family business we deem it our responsibility to operate in a sustainable manner for future generations, continuously reducing our carbon footprint until we reach our net zero target

To this end we commit to:

1. Carbon Footprint Measurement and putting in actions to reduce this.
2. Waste Reduction through increased recycling and more efficient use of materials.
3. Energy Efficiency through reducing non-essential energy use and investing in technology to optimise energy usage.
4. Green Energy through purchases from suppliers and / or generating clean energy.
5. Sustainable Sourcing – to procure products from suppliers who share our commitment to reducing their carbon footprint.
6. Green technology – wherever viable we look to implement green technology such as the use of EVs in our fleet of cars.
7. Educating our team and supporting our customers – we commit to raising environmental awareness and carbon literacy levels within our organisation as well as amongst our customer base through events and other materials.

We have a Sustainability Lead who manages all our sustainability policies and reports monthly to our Management Board. This environmental statement is formally reviewed annually, or before if there have been significant changes to the business, by our Managing Director.

This environmental statement is on display on our website, in our reception area, features in our team induction pack and in our internal sustainability training.
